

Saurabh Kamble

Senior Full Stack Developer | Associate Tech Lead

Pune, India • 8095055988 • saurabh2836@gmail.com • github.com/saurabh2836 • linkedin.com/in/saurabh-kamble

PROFESSIONAL SUMMARY

Senior Full Stack Developer and Tech Lead with 10+ years of experience building and scaling high-traffic web platforms across matrimonial, health-tech, media, and mobility domains. Expert in PHP/Laravel/CodeIgniter, Node.js, Vue.js, and cloud-native AWS architectures (ECS, Lambda, SQS, SNS, CloudWatch). Delivered measurable business impact — 40–50% improvements in ARPU, order conversion, and lead generation — through platform modernisation and microservices adoption. Following a health-related career break (Jun 2024–Apr 2025), returned with deepened expertise in Rust (Tokio, microservices), Next.js 14 (App Router, Vercel), and Anthropic Claude AI — completing 70+ hours of structured training and shipping real projects to GitHub.

KEY ACHIEVEMENTS

- Delivered **40% uplift in ARPU & order conversion** on VIPShaadi.com via full platform rebuild — Zend monolith → Laravel/Node.js microservices.
 - Achieved **50% improvement in ARPU & conversion** on SelectShaadi.com by replicating proven modernisation strategy.
 - Drove **30% increase in email open-rates** and near-perfect Google PageSpeed scores via frontend performance engineering.
 - Generated **20% lead-generation growth** through an integrated app-popup feature across Shaadi platforms.
 - Replaced legacy PHP cron jobs with **AWS Lambda functions**, reducing infrastructure cost and improving reliability of scheduled tasks.
 - Designed HMVC database architecture in CodeIgniter **supporting** 2,36,000+ monthly active users at Wheelstreet with zero downtime during peak rental seasons.
-

PROFESSIONAL EXPERIENCE

Associate Tech Lead • **People Interactive — [Shaadi.com](https://www.shaaadi.com)**

Jan 2019 – May 2024

Mumbai, India | Team: 2–4 Engineers

Cloud Infrastructure & DevOps

- Architected CI/CD pipelines using GitHub Actions to automate deployments to AWS ECS, eliminating manual releases and reducing deployment errors across staging and production environments.
- Implemented AWS CloudWatch dashboards and alarms for real-time monitoring; configured SNS alerts for critical service failures to give the team immediate incident visibility.
- Designed event-driven data pipelines using Apache Kafka and SQS to capture all platform events (user actions, advisor interactions, payments), processed asynchronously by Node.js microservices — enabling reliable, decoupled data flows at scale.
- Replaced legacy PHP cron jobs with AWS Lambda functions, improving scheduling reliability and reducing server load and infrastructure costs.

VIPShaadi.com — Platform Modernisation Lead

- Led full migration from a Zend-based monolith to a standalone Laravel/Node.js platform, achieving 30% improvement in email open-rates and near-perfect Google PageSpeed scores.
- Delivered 40% uplift in ARPU and order conversion through performance engineering, A/B-tested checkout flows, and improved mobile UX.
- Built an integrated app-popup lead-capture feature driving 20% growth in qualified lead generation.

SelectShaadi.com — Growth Engineering

- Applied the same modernisation strategy to SelectShaadi, achieving 40% increase in open-rates and 50% improvement in ARPU and order conversion — ahead of schedule.

Architecture & Team

- Designed and built an incentive microservice (Laravel + Node.js + Kafka) for real-time advisor reward calculation, fully decoupled from the core monolith for independent scaling.
- Enhanced Advisor Dashboard with real-time KPI visualisation, reducing manual reporting overhead and improving advisor productivity.
- Mentored a team of 2–4 engineers across sprint planning, code reviews, and technical decision-making.

Senior Software Engineer · [Sourcebits Technologies](#)

Sept 2016 – Dec 2018

Bengaluru, India

Tata Digital Health — Frontend & API Integration

- Adapted and extended an existing Android REST API layer to power a new web frontend built in Laravel — the APIs were designed exclusively for mobile and had no web implementation, requiring careful analysis of all endpoints and creative adaptation for browser-based consumption.
- Integrated doctor consultation features (chat, audio, video call) and Vita Cloud device sync into the web portal, working smart around API constraints that were not originally designed for web use cases.
- Maintained PSR-2 coding standards and a strict layered architecture throughout, ensuring the web portal remained maintainable and aligned with the mobile codebase.

SonyLIV — KBC Admin Panel & WebSocket Frontend

- Built the KBC (Kaun Banega Crorepati) admin panel enabling producers to manage real-time quiz state, push questions, and control the game flow via WebSocket — directly driving the live broadcast experience seen by viewers.
- Engineered the WebSocket-powered frontend entirely in vanilla JavaScript (no framework), delivering precise control over event handling and real-time DOM updates critical for a live game show.
- Diagnosed and resolved a significant cross-browser WebSocket compatibility issue in Safari (WebKit engine), where Safari's different WebSocket handshake behaviour caused silent failures on mobile web — required deep-diving WebKit documentation and implementing a custom fallback handshake strategy.
- Delivered all features against broadcast deadlines, navigating a multi-protocol architecture spanning WebSockets, REST, and 2–3 concurrent language layers.

Lead Developer · [Wheelstreet.in](#)

Feb 2016 – Aug 2016

Bengaluru, India | Reported directly to CTO

Database Architecture & Backend

- Designed the complete relational database architecture for the bike-rental platform from scratch — modelling entities for vendors, consumers, bookings, inventory, and support workflows, with a focus on query performance and data integrity at scale.
- Implemented HMVC (Hierarchical Model-View-Controller) architecture in CodeIgniter, creating a modular codebase that cleanly separated vendor, consumer, and support role logic and made the platform significantly easier to extend and maintain.
- Optimised database schema and query execution plans to handle 2,36,000+ monthly active users with no downtime during peak rental seasons.

API & Mobile Integration

- Built RESTful API services from scratch consumed by both Android and iOS apps — designed with mobile-first constraints in mind, covering booking flows, inventory lookup, vendor management, and real-time availability.
 - Coordinated with the testing and support teams to document new features and resolve customer-facing issues quickly.
-

CAREER BREAK & TECHNICAL UPSKILLING

Jun 2024 – Apr 2025 | Health recovery & self-directed learning | github.com/saurabh2836

Took a planned break to recover from respiratory health issues developed during extended years in Mumbai. Used the recovery period productively to deepen expertise in modern and systems-level technologies, shipping real projects to GitHub.

Rust Microservice — Multi-Database Service Mesh github.com/saurabh2836/rust-microservice

Stack: Rust, Tokio (async runtime), Actix-Web, PostgreSQL, MongoDB

Built a production-pattern microservice in Rust using the Tokio async runtime, connecting and orchestrating multiple databases across independent services. Demonstrates ownership of async I/O, connection pooling, and inter-service communication in a memory-safe systems language.

Rust Fundamentals — 70-hour Structured Course github.com/saurabh2836/rust-coding-course

Stack: Rust — Udemy: Learn to Code Rust (70+ hours completed)

Completed a comprehensive 70-hour Rust course covering ownership, borrowing, lifetimes, traits, generics, error handling, concurrency, and async programming. Repository contains all exercises and projects from the course.

JSMastery Flow — Stack Overflow Clone (Next.js 14) github.com/saurabh2836/jsmastery-flow

Stack: Next.js 14 (App Router), React Server Components, TypeScript, Tailwind CSS, Vercel

Built and deployed a full-featured Stack Overflow clone. Implements App Router, Server Actions, streaming, authentication, and edge deployment on Vercel — covering the complete modern React/Next.js 14 production stack.

- **Also explored:** Anthropic Claude API (Messages API, tool use, streaming, multi-turn conversations) integrated with Next.js 14 frontends; actively following React 19, Tailwind v4, and Bun/Hono ecosystems.

TECHNICAL SKILLS

Languages: PHP, JavaScript (ES6+), TypeScript, Rust, SQL

Frontend: Vue.js, React.js, Next.js 14 (App Router, RSC, Server Actions), Vanilla JS, HTML5, CSS3, Tailwind CSS

Backend & APIs: Laravel, CodeIgniter (HMVC), Node.js, Express.js, Actix-Web (Rust), RESTful APIs, WebSockets, GraphQL

AI & LLMs: Anthropic Claude API, Prompt Engineering, Tool Use / Function Calling

AWS & Cloud: ECS, Lambda, SQS, SNS, CloudWatch, EC2, S3, RDS, Vercel (Edge Deployment)

Messaging: Apache Kafka, SQS, RabbitMQ

DevOps & CI/CD: GitHub Actions, Docker, Linux, Git

Databases: MySQL, PostgreSQL, MongoDB, Redis

Architecture: Microservices, HMVC, Event-Driven Design, Monolith-to-Microservices Migration, Async I/O (Tokio)

Practices: Agile/Scrum, Sprint Planning, Code Review, Technical Mentorship, Recruitment

EDUCATION & TRAINING

B.E. Computer Engineering — Sandip Foundation, Pune University 2008 – 2012 | *First Class*

Learn to Code Rust — Udemy | 70+ hours | github.com/saurabh2836/rust-coding-course

Next.js 14 Full Stack Bootcamp — JSMastery | Deployed: github.com/saurabh2836/jsmastery-flow
